Managing Diabetes Through Telehealth

with support from point-of-care A1C testing

Diabetes was one of the leading global health challenges before the arrival of COVID-19.

Now, healthcare providers who treat individuals with diabetes are facing more challenges on top of an already complex problem. Many are finding a solution in the convenience and technological benefits offered by telehealth.

Telehealth may help healthcare providers:

- Better support patients who are vulnerable to complications from COVID-19[2]
- Ensure the frequency and quality of the care that individuals with diabetes require
- Remotely monitor patients' progress toward health goals and adjust therapies as needed
- Conduct A1C testing during a virtual visit

Did You Know?

Telehealth has been shown to be **more effective** in improving treatment outcomes for people with Type 2 diabetes when compared to conventional care.[1]

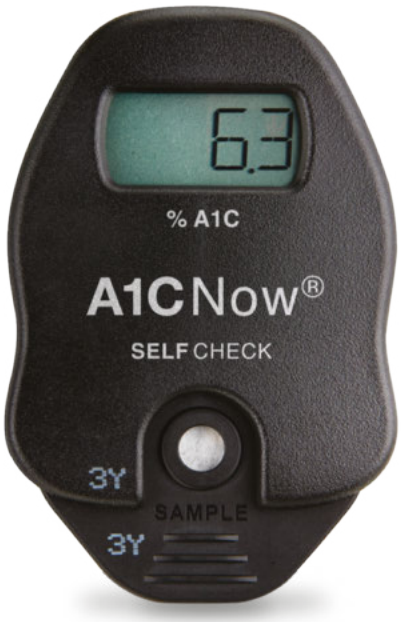
preVantage™

Help Patients Get Reliable A1C Results at Home

With A1CNow® Self Check



Easy to Use

- **Fingerstick** blood sample
- Clearly marked components and easy to follow instructions
- Online video training: **ptsdiagnostics.com/a1cnow-self-check/**

Accurate

Results you can trust

- NGSP-certified
- IFCC-traceable
- CE-marked for self-test use
- CLIA-waived

A1CNow® Self Check Test System Key Features

- Results in 5 minutes
- Small (5 µL) fingerstick blood sample
- No maintenance
- Room temperature storage
- Small, compact, and battery-powered
- Affordable
