**Important Update: ORAQUICK® HIV SELF-TEST EXPANDED AGE CLAIM:
FOR USE IN ADOLESCENTS AGED 14 YEARS AND OLDER**

The Food and Drug Administration (FDA) has approved an expansion of the age range for the OraQuick® HIV Self-Test that will allow increased access to HIV testing for adolescents. The change expands the approved age range to include individuals **14 years of age and older**.

Previously the test was approved for use in those 17 and older. This expanded approval is a significant step in increasing the accessibility of HIV testing, and will make it easier for adolescents to know their status and take proactive steps towards their health.

Key Points:

- 1. Expanded Age Approval:** The OraQuick® Self-Test can now be used by individuals aged **14 years of age and older**.
- 2. Existing OraQuick® Self-Test Kits:** The kits currently in your possession and in our inventory are approved for this expanded use, so there are no additional steps required to provide these kits to individuals aged 14 years and older.

If you have any questions regarding the use of the OraQuick® Self-Test, or would like to purchase the test, please contact your local account manager, distribution partner, or the OraSure Customer Care Team at: 1-800-ORASURE (1-800-672-7873).

Sincerely,

Shane Hebel
