

INDICAID™ Immunochemical Fecal Occult Blood Test

Simple screening. Powerful prevention.

At-home colorectal cancer screening* in just 10 minutes.
A fast, affordable way to screen for hidden blood in stool—supporting early detection and peace of mind.

PRODUCT OVERVIEW

Immunochemical Fecal Occult Blood Test

The iFOB (immunochemical fecal occult blood) rapid test enables individuals to conveniently and privately screen for fecal occult blood as an aid in the screening of colorectal cancer or other disorders that cause GI bleeding from home. Designed for over-the-counter use, this self-test requires no equipment, delivering quick and reliable results.

This test has been cleared by the U.S. Food and Drug Administration (FDA) under 510(k) for use in detecting fecal occult blood as an aid in the screening of colorectal cancer or other disorders that cause GI bleeding. This test is cleared by FDA for home use. For positive results, further examination should be performed by a physician to determine the exact cause of bleeding. Negative results do not rule out the presence of gastrointestinal disease, and follow-up testing may be necessary. *This test is used as an aid to detect gastrointestinal (GI) bleeding, which can be a sign of colorectal cancer or other GI disorders. Further examination should be performed by a physician to determine the exact cause of bleeding.
